### Striker Systems Introduces STRIKER Costing Assistant Software

White House, TN – Striker Systems announces the availability of a new software application that allows STRIKER CAD/CAM software users to quickly generate a per-part cost of CNC cutting operations.

STRIKER Costing Assistant is available as an add on to STRIKER CAD/CAM & Nesting software. It calculates a per part machine operation cost for SS-PROFILE cut parts to assist with cost allocation and quoting. Included in the calculation of the machine operation cost, STRIKER Costing Assistant considers all machine consumables, utilities, facilities, labor, maintenance, and other cost considerations as configured by the user.

“A focus of Striker Systems is to provide our customers with as much information as possible from our manufacturing software. STRIKER Costing Assistant is a tool that the customer can incorporate into their costing or quoting processes in a number of ways.” - Michael Boggs, Sales and Marketing Manager of Striker Systems

STRIKER Costing Assistant is user configurable to adapt to specific manufacturing operations. This flexible feature allows for multiple styles to be created to handle various materials and cutting operations. When integrated with SS-NEST, STRIKER Costing Assistant not only provides an individual part cutting cost but it also provides the machine cutting cost for each part across an entire nested job containing multiple layouts.

For additional information on the STRIKER Costing Assistant or to schedule an online demonstration, contact Striker Systems Sales at 800.950.7862 or email at [sales@strikersystems.com](mailto:sales@strikersystems.com)
